	SLICERS ASEMBLY ON IFU KCWI
-----------------------------------------------------------------------------------	----------------------------------------

1 SUBJECT

This document describes the procedure to install and remove the Slicers 1, 2, 3 and the camera on the IFU bench.

Important note: Each picture shows a specific action to do. These are just for examples and sometimes they have been taken during the tests before packaging.

2 DOCUMENT

KCWI IFU nomenclature: WO4340-010-NOM1

3 TOOLS AND PRODUCTS

Set of hexagonal screwdriver CHC M1.5 to M8

Ethyl alcohol

Gloves, Mask

4 MANUFACTURING TOOLS

Grey room class 100.000

5 MEASURING TOOLS

None

6 ENVIRONMENT

Temperature : $18^{\circ}\text{C} \leq T^{\circ}\text{C} \leq 22^{\circ}\text{C}$

Relative humidity : $30\% \leq Hr \leq 70\%$

7 PARTICULAR CAUTION

Use gloves and mask to manipulate the slicers. The slicers don't have to be cleaned but they need to be blown.

All the slicers are sensitive to the shocks. You must take care to the screwdriver and your hands.

All the manipulations and handling have to be done with at least 2 persons. The first person is working while the second one is watching.

There is leaf spring on the side of each slicer or camera. The spring makes a pressure to press the component on the reference pins.

8 OPERATIONS

8.1 REMOVING FROM THE IFU BENCH

R1

Unscrew the 2 CHC M4 of the cover of the slicer 1
(don't remove the screw from the cover)

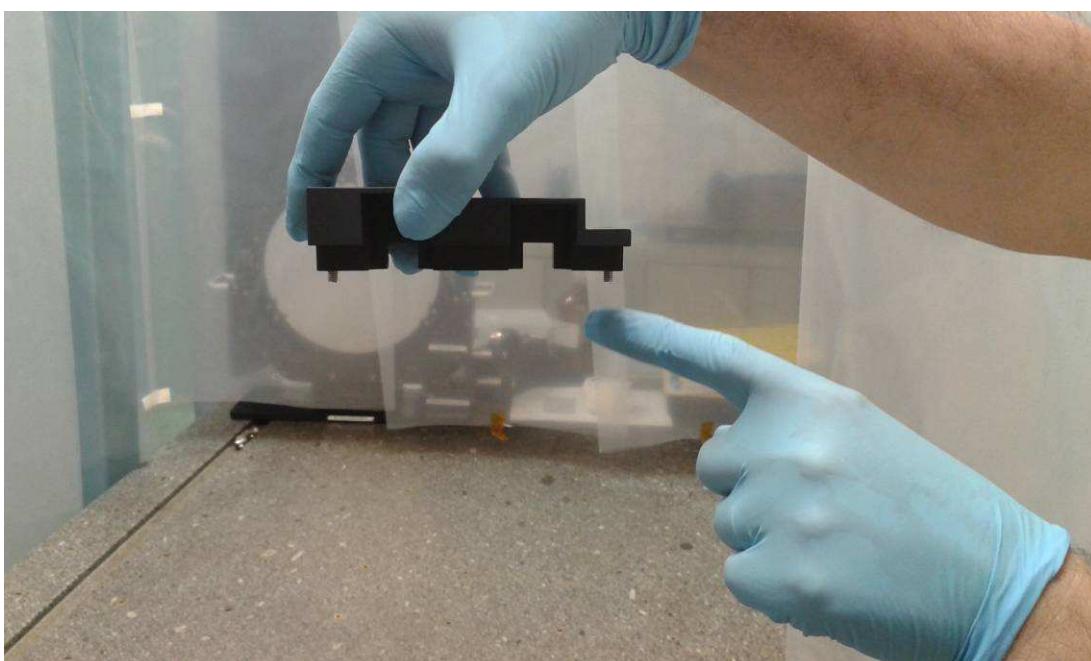

R2

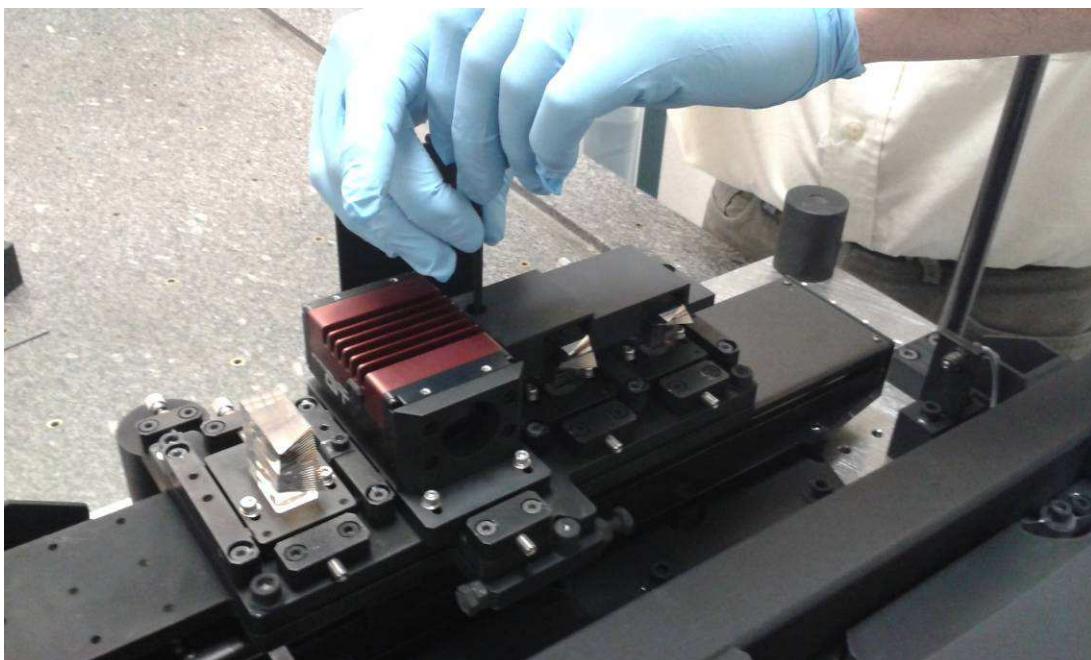

Pull up the cover vertically
(there is no guide, but there is no risk to touch the slicer)

R3
End of cover pulling up

R4
Never reverse the cover to keep the screws in place

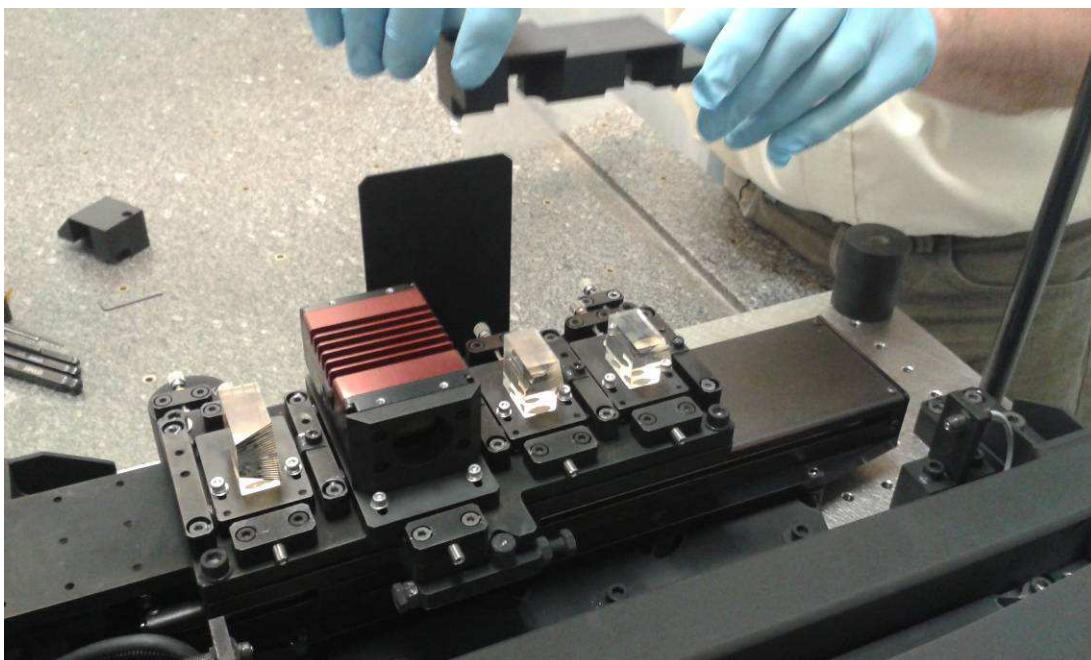

R5

Unscrew the 2 CHC M4 of the cover of the slicer 1
(don't remove the screw from the cover)

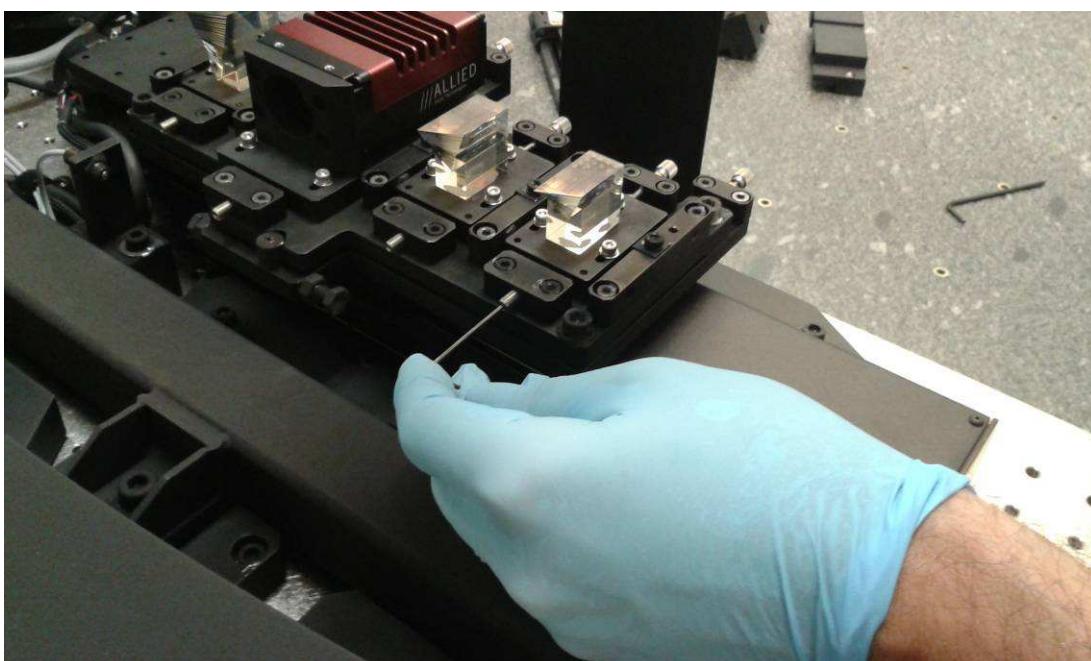

R6

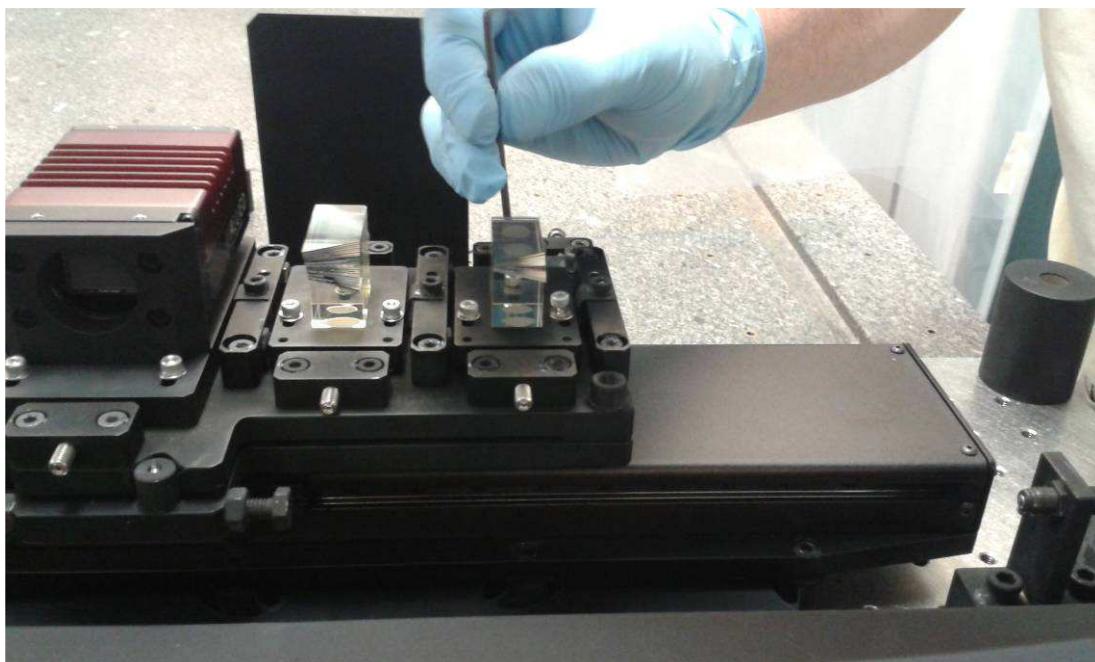

Pull up the cover vertically
(there is no guide, but there is no risk to touch the slicer)

R7
End of cover pulling up

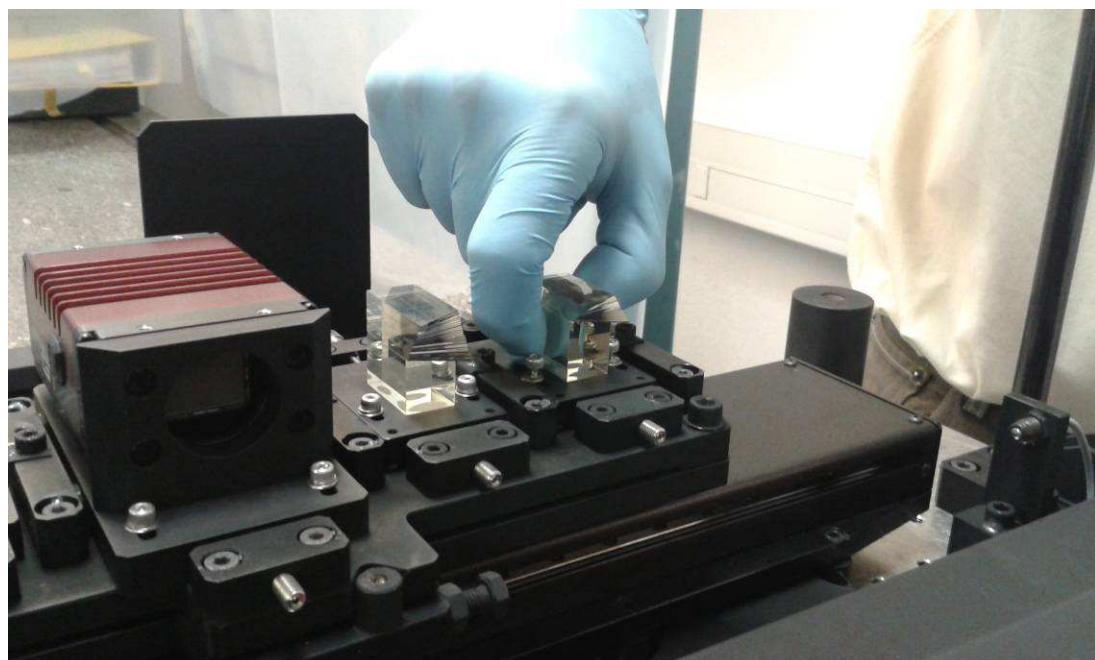

R8
Unscrew the 4 front pusher (hexagonal 1.5mm screwdriver)

R9

Unscrew the 3 captive CHC M3 of the slicer 3

(There is a captive washer, so you just have to be sure the screw is free before to unscrew the second one,...)

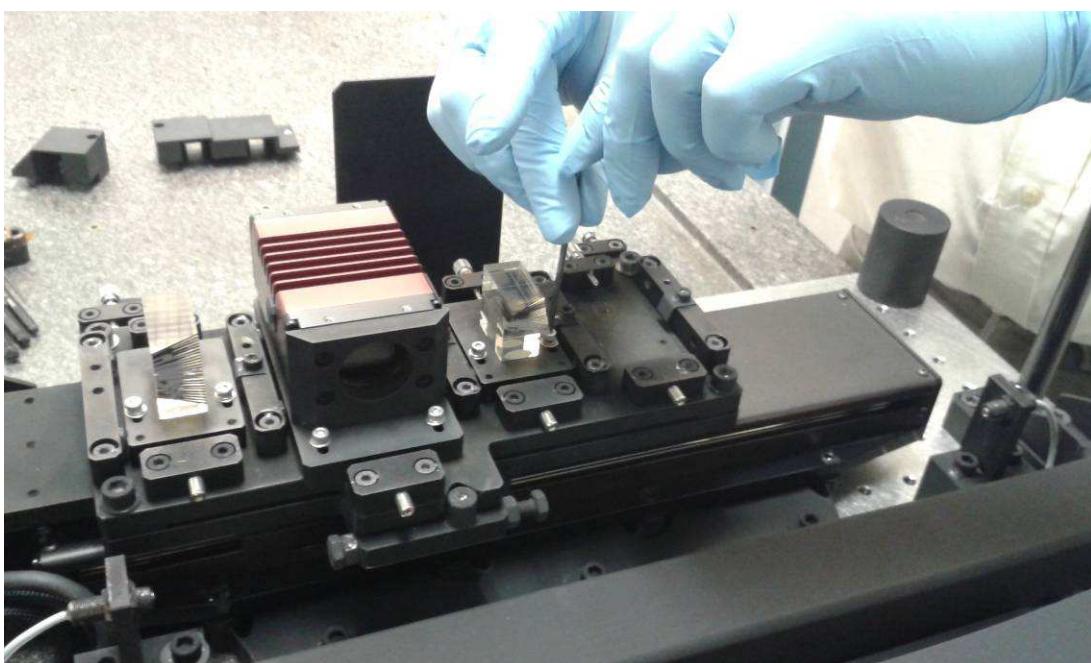

R10

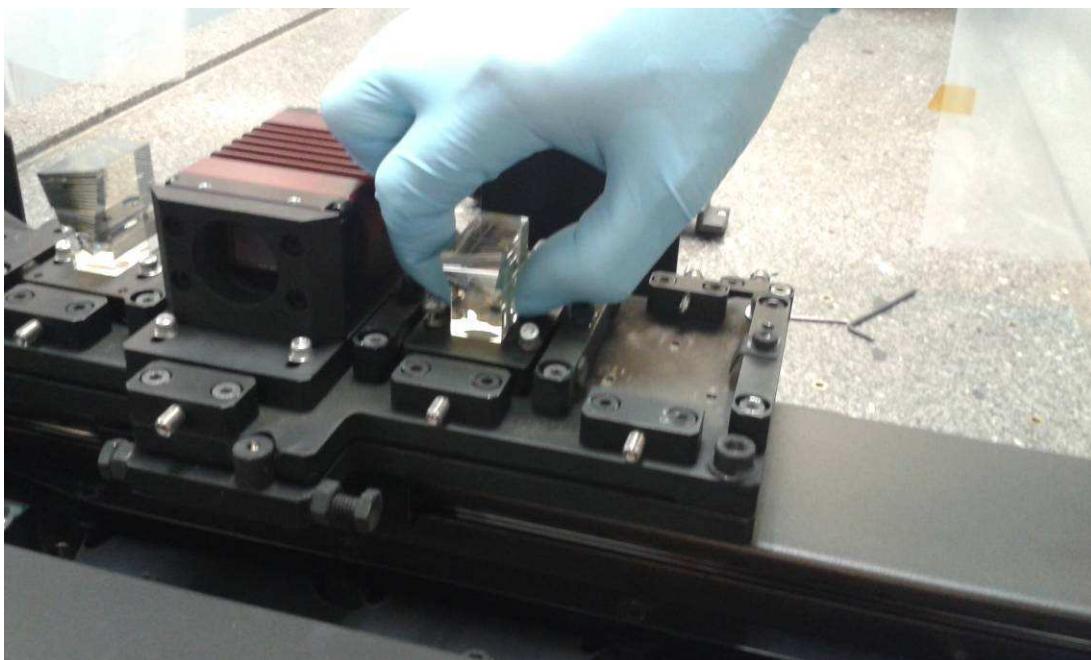

Catch the slicer tightening the spacer only
Toggle the slicer pulling up the front of the slicer

R11
Keep safe the slicer while you are moving it

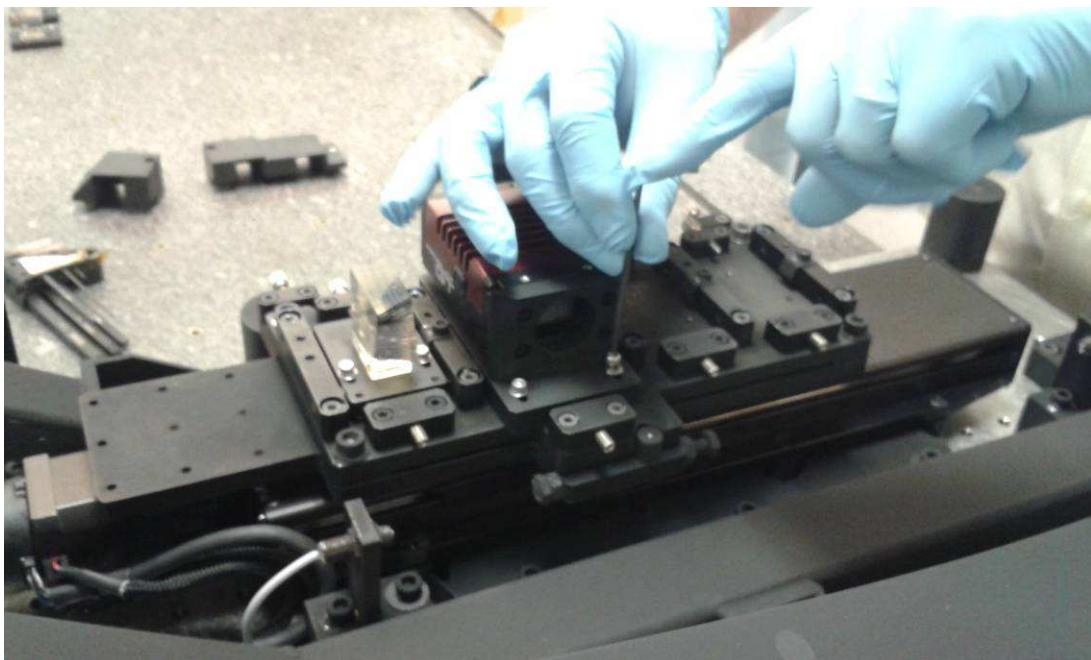

R12
Unscrew the 3 captive CHC M3 of the slicer 2
(There is a captive washer, so you just have to be sure the screw is free before to unscrew the second one,...)

R13

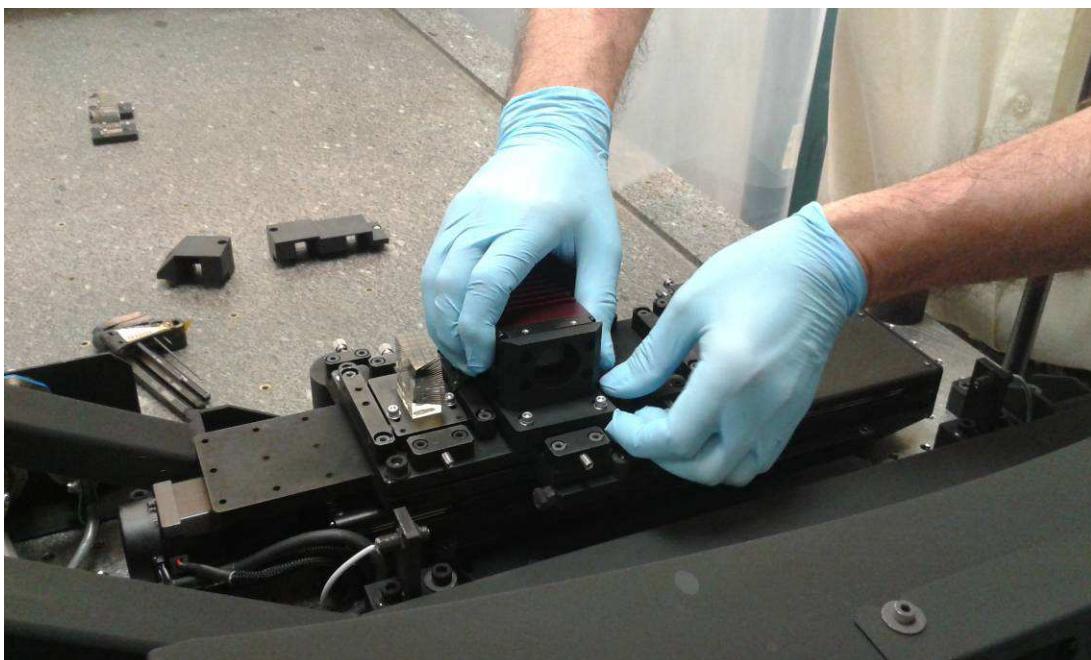

Catch the slicer tightening the spacer only
Toggle the slicer pulling up the front of the slicer

R14

Unscrew the 3 captive CHC M3 of the camera

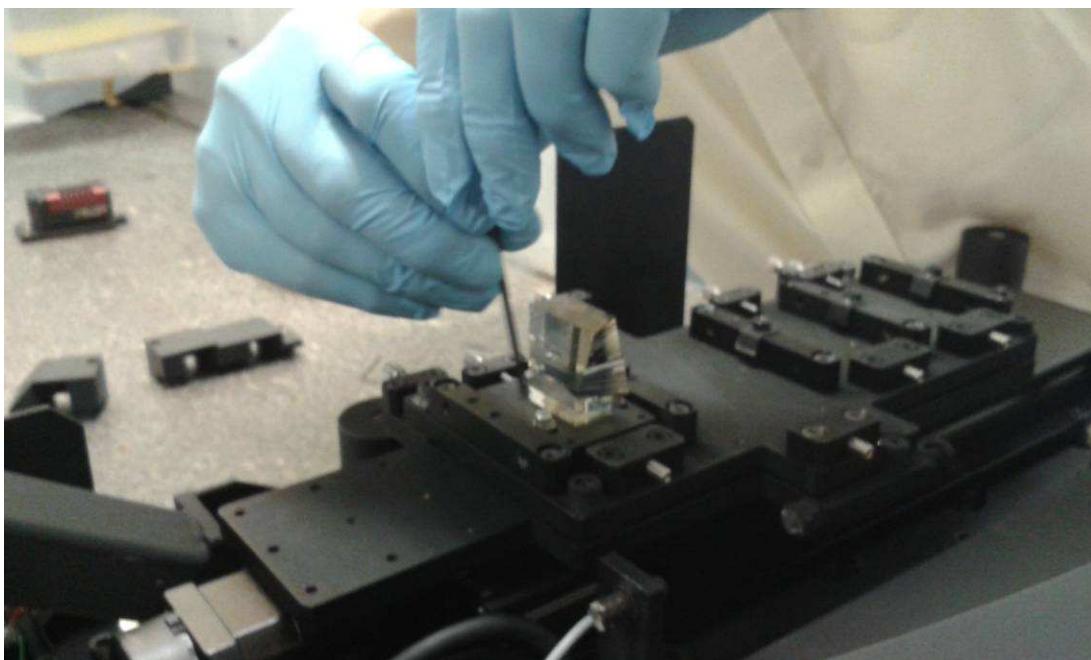

(There is a captive washer, so you just have to be sure the screw is free before to unscrew the second one,...)

R15

Catch the camera

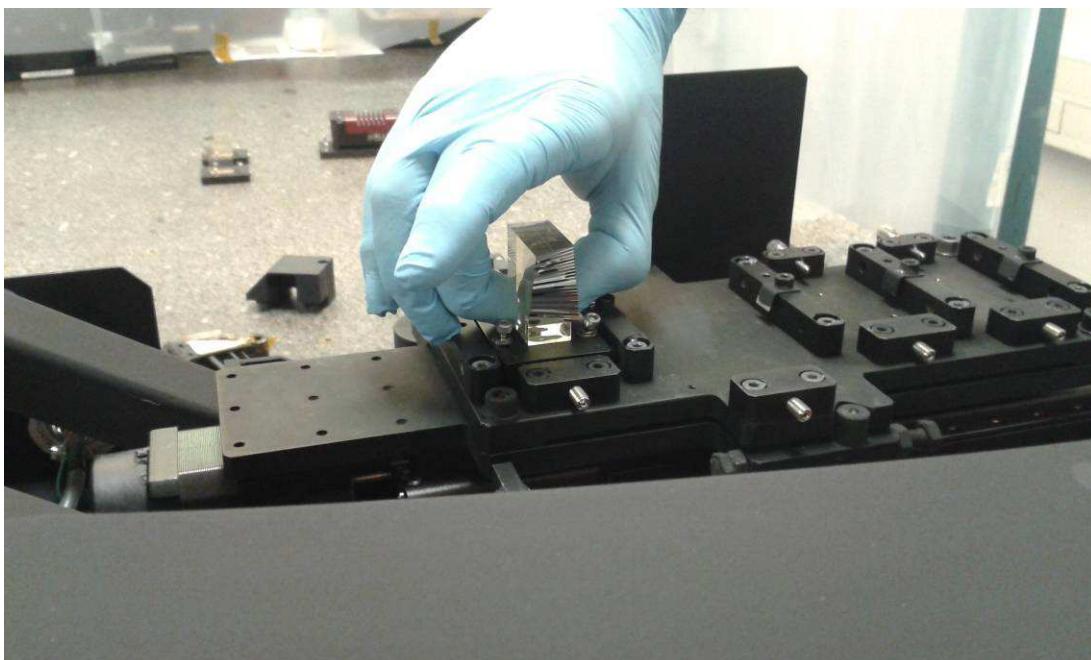

Toggle the camera pulling up the front of the slicer
(Take care because the leaf spring is strong)

R16

Unscrew the 3 captive CHC M3 of the slicer 1

(There is a captive washer, so you just have to be sure the screw is free before to unscrew the second one,...)

R17

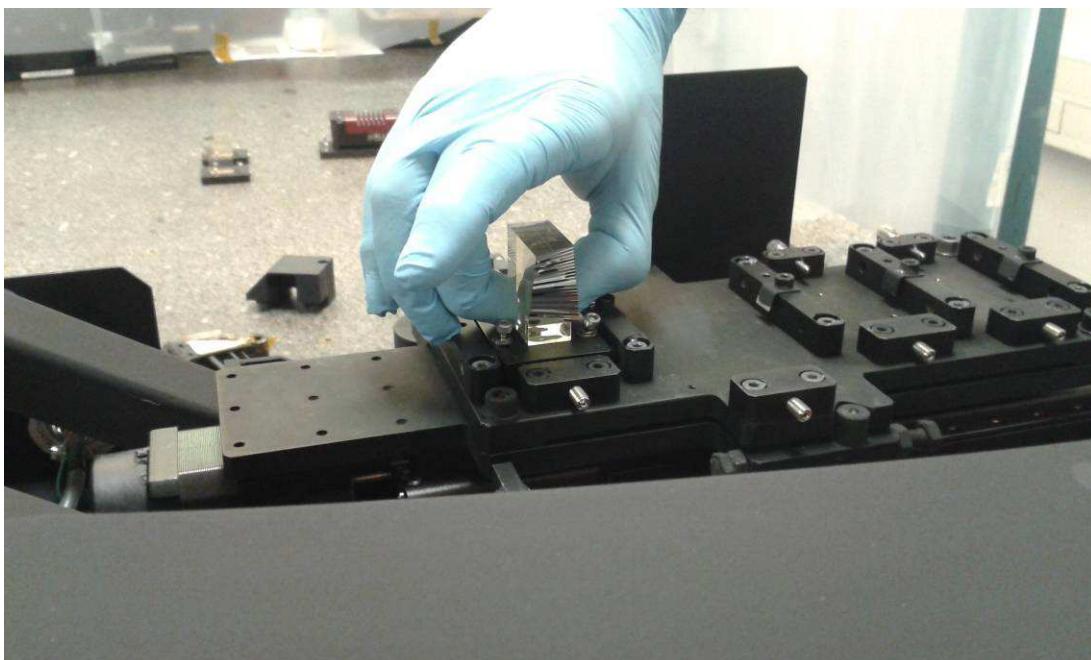

Catch the slicer 1 tightening the spacer only
Toggle the slicer pulling up the front of the slicer

8.2 INSTALLATION ON THE IFU BENCH

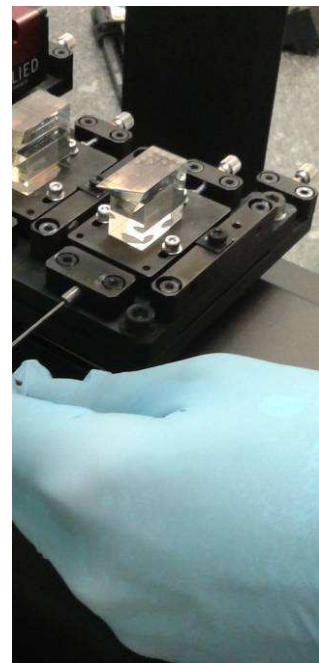

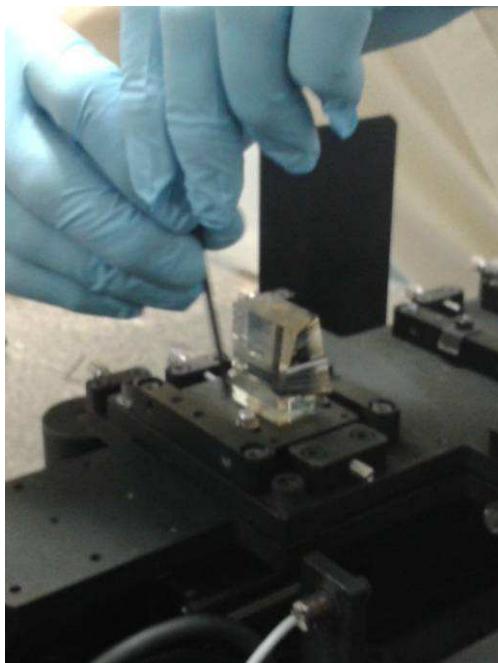

I1

Catch the slicer 1 tightening the spacer only
Keep safe the slicer while you are moving it

I2

Toggle the slicer 1 pushing down the rear surface of the slicer

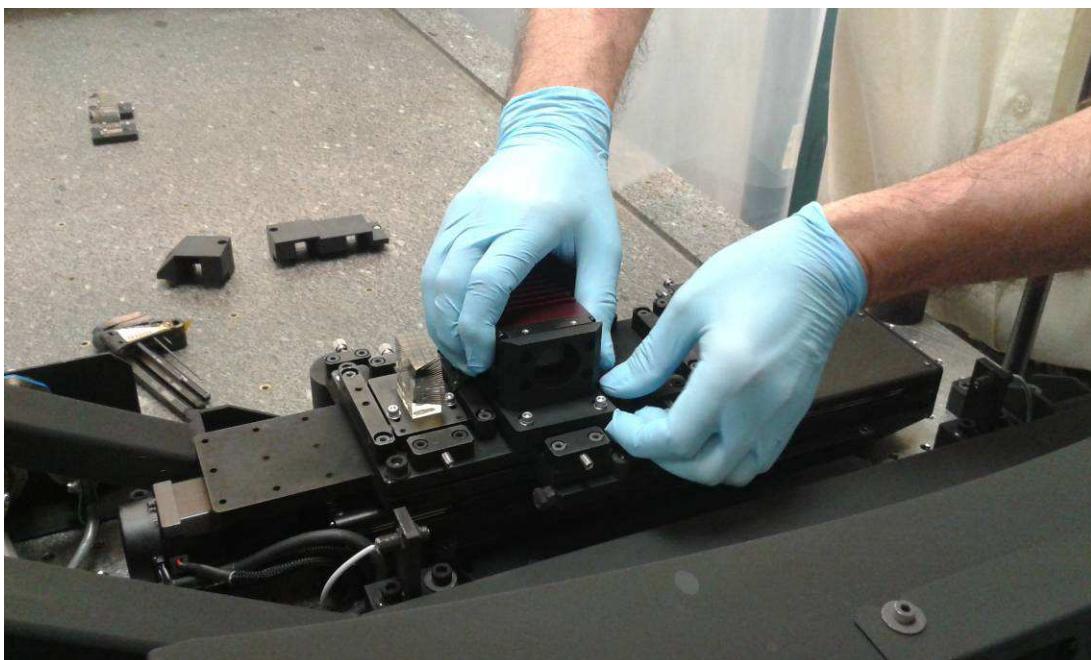

I3

Move horizontally the slicer 1 to be sure to be on the reference surfaces

Screw the 3 captive CHC M3 of the slicer 1

(There is a captive washer, so you just have to be sure the screw is in the tapered hole before to screw the second one,...)

The slicer must not be tighten before the front pusher has been screwed

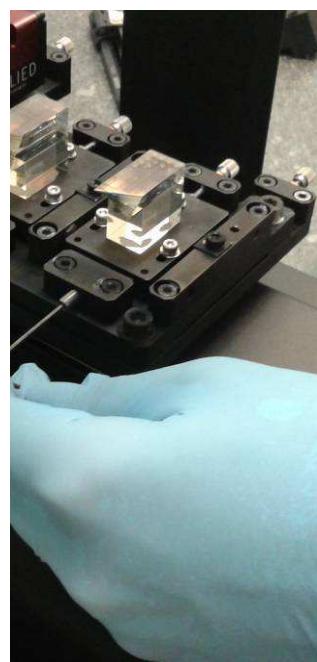

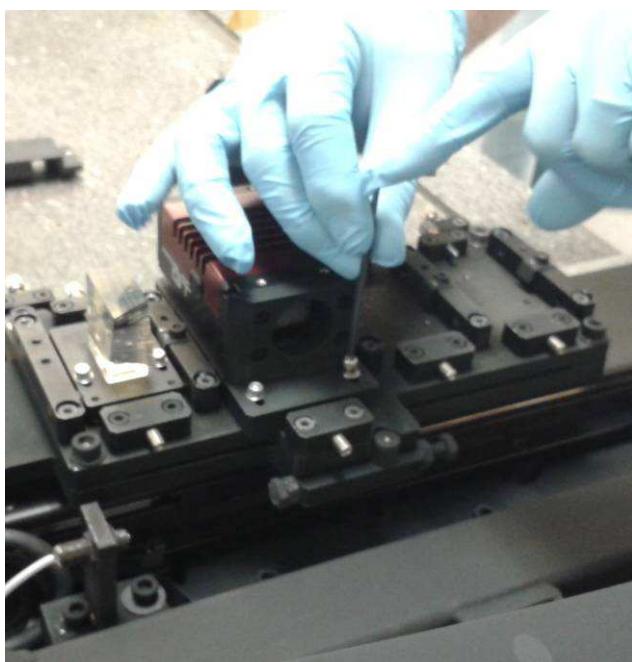

I4

Catch the camera

Toggle the camera pushing down the rear surface of the camera

(Take care because the leaf spring is strong)

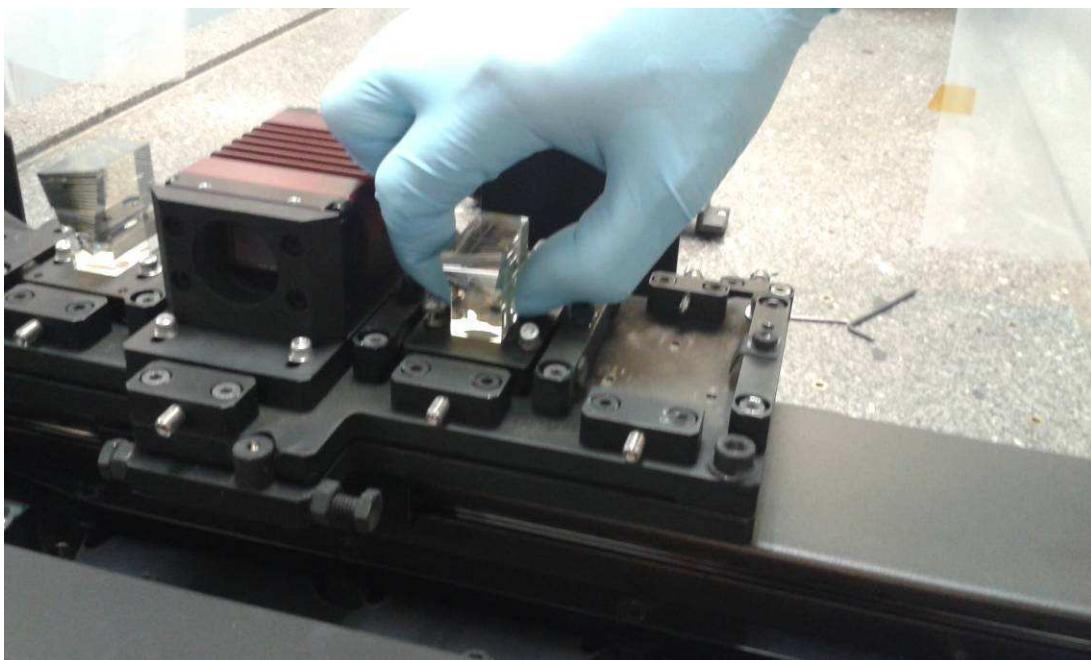

I5

Move horizontally the camera to be sure to be on the reference surfaces

Screw the 3 captive CHC M3 of the camera

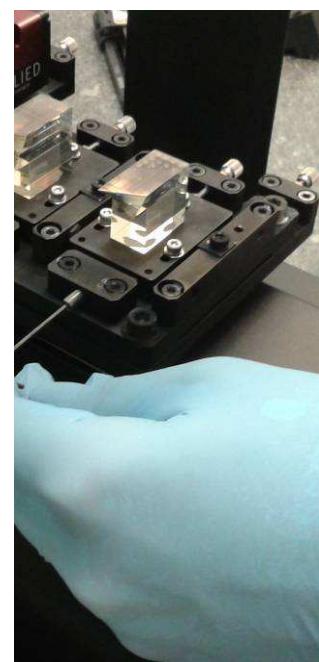

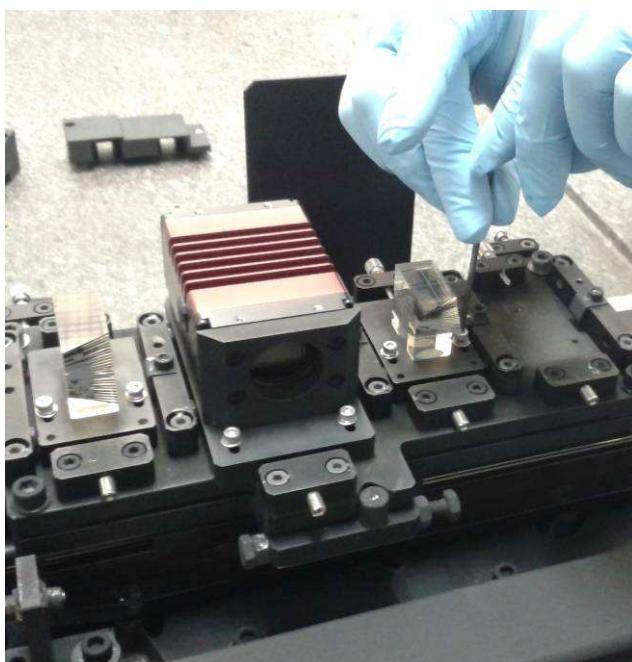

(There is a captive washer, so you just have to be sure the screw is in the tapered hole before to screw the second one,...)

The camera must not be tighten before the front pusher has been screwed

I6

Catch the slicer 2 tightening the spacer only
 Keep safe the slicer 2 while you are moving it
 Toggle the slicer 2 pushing down the rear surface of the slicer

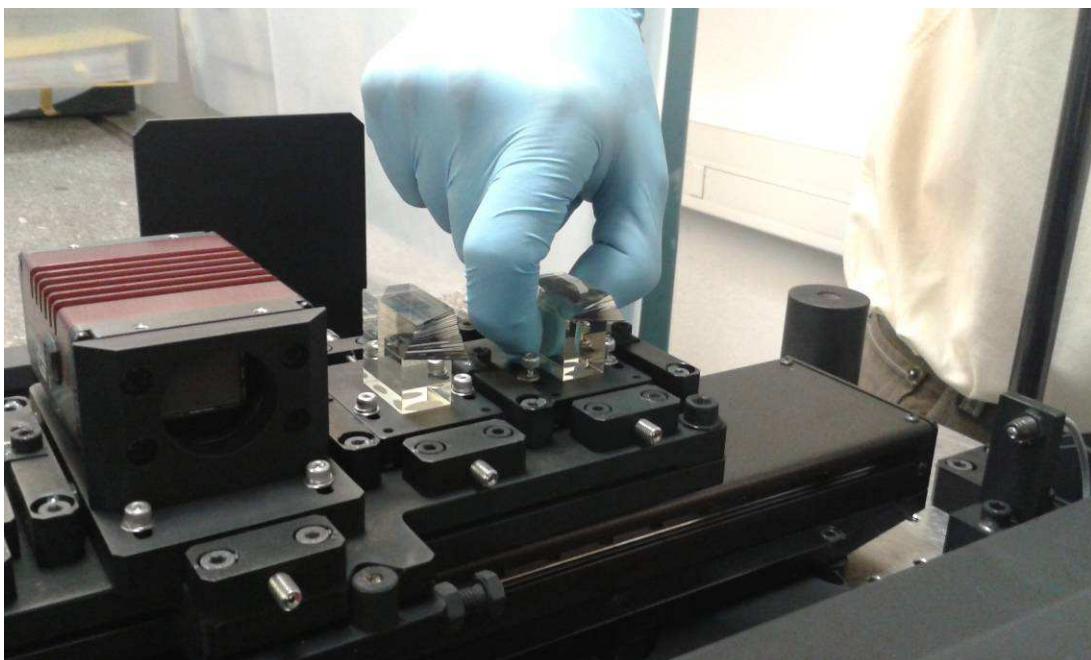

I7

Move horizontally the slicer 2 to be sure to be on the reference surfaces
 Screw the 3 captive CHC M3 of the slicer 2

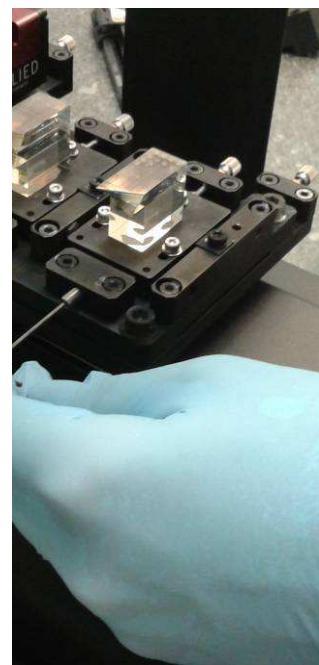

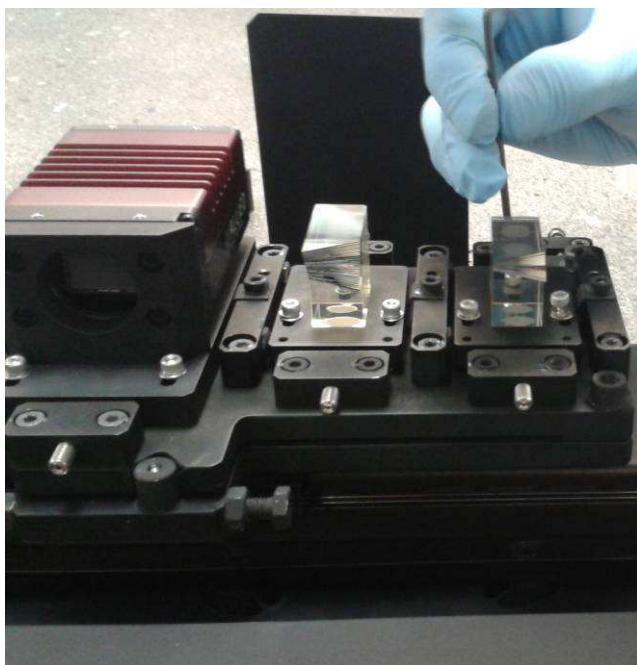

(There is a captive washer, so you just have to be sure the screw is in the tapered hole before to screw the second one,...)

The slicer must not be tighten before the front pusher has been screwed

I8

Catch the slicer 3 tightening the spacer only
 Keep safe the slicer 3 while you are moving it
 Toggle the slicer 3 pushing down the rear surface of the slicer

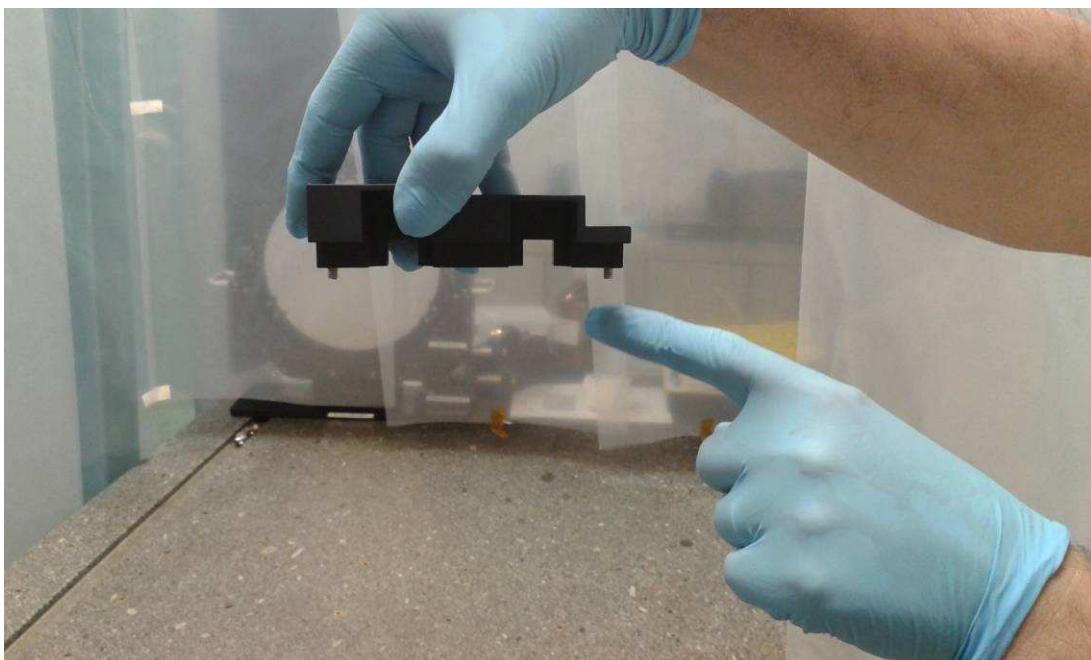

I9

Move horizontally the slicer 3 to be sure to be on the reference surfaces
 Screw the 3 captive CHC M3 of the slicer 3

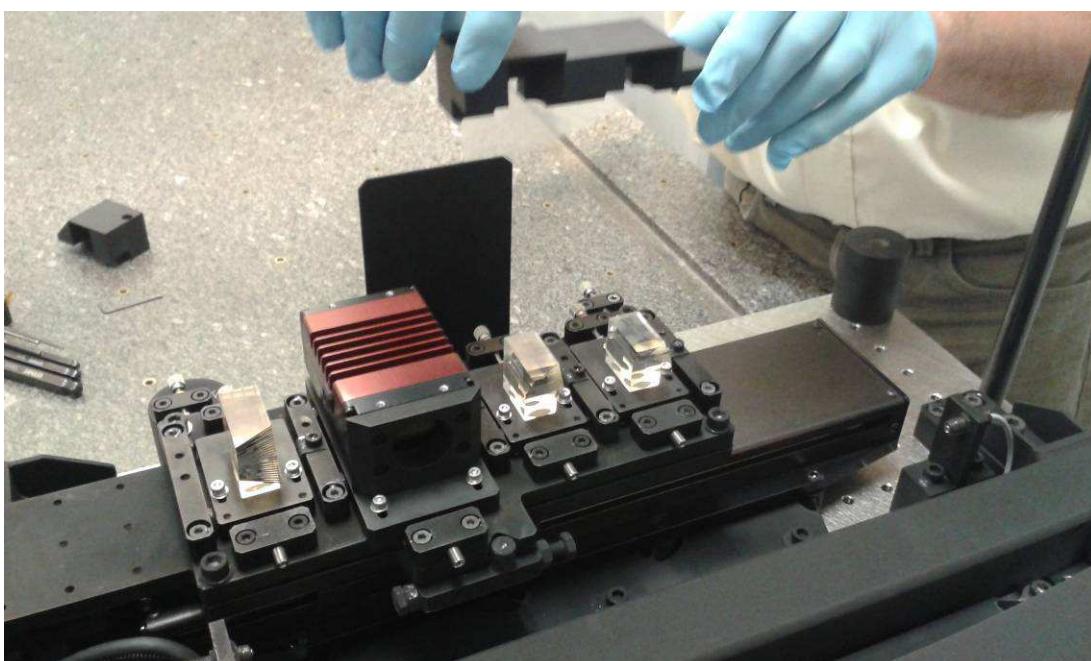

(There is a captive washer, so you just have to be sure the screw is in the tapered hole before to screw the second one,...)

The slicer must not be tighten before the front pusher has been screwed

I10

Never reverse the cover to keep the screws in place

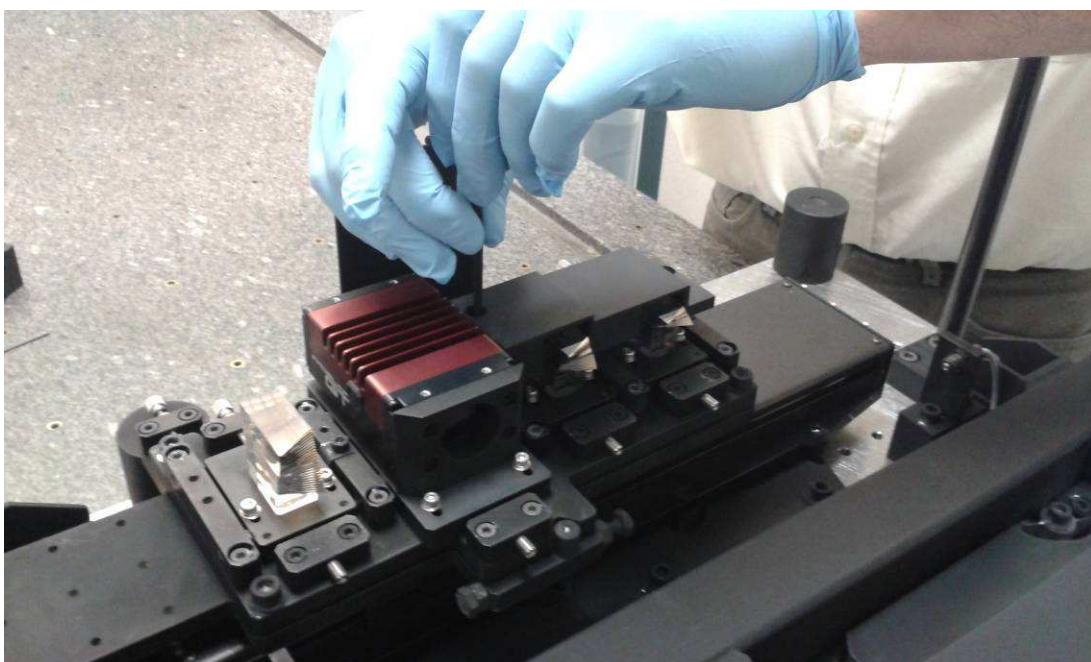

I11

Beginning of cover vertically moving down

I12

End of the cover moving down
(there is no guide, but there is no risk to touch the slicer)
Have a watch to align the screws with the tapered holes

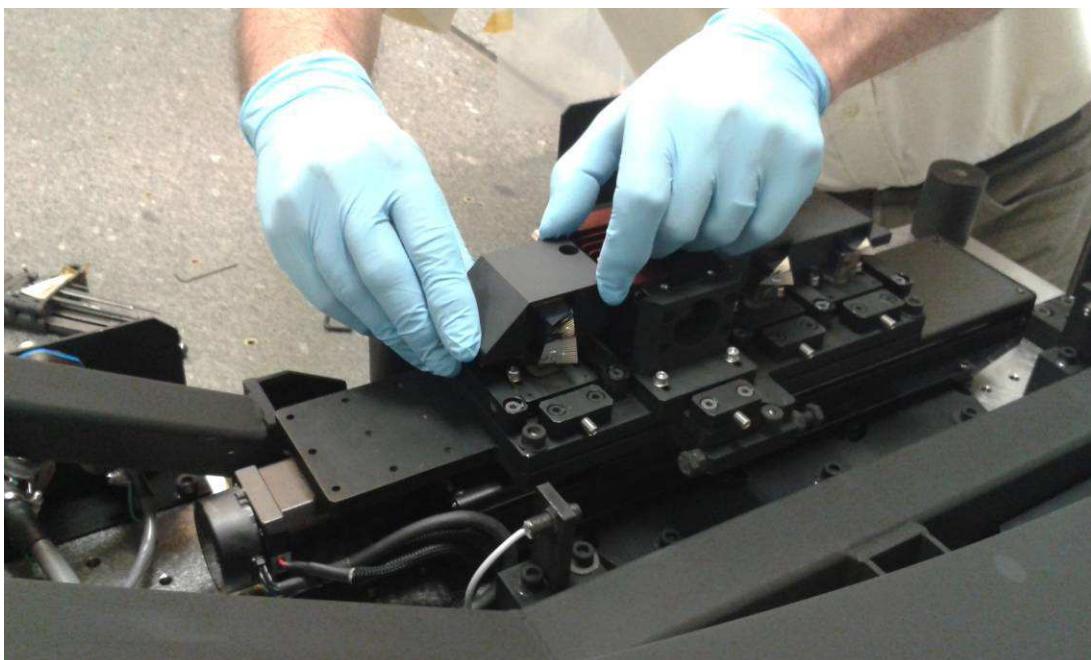

I13

Screw the 2 CHC M4 of the cover of the slicer 2 and 3

I14
Beginning of cover vertically moving down

I15
End of the cover moving down
(there is no guide, but there is no risk to touch the slicer)
Have a watch to align the screws with the tapered holes

I16

Screw the 2 CHC M4 of the cover of the slicer 2 and 3

9 QUALITY ASSURANCE

The project will be managed according to ISO9001 standard.

As part of the quality control procedures, if a non conformity arises from any moment during the development of the work, the contractor will immediately communicate it to CALTECH or WINLIGHT OPTICS.
