

HIRES Instrument Server Reboot Procedure (Lehoula)

Periodic (i.e. monthly) reboots of the instrument server are recommended

Shut down the daemons:

From a lehoula xterm: hires stop daemons

Establish a Telnet session with Lehoula and reboot:

1. Open an xterm (e.g. kaalualu, but NOT lehoula):

```
telnet k1consoles-2 2010
```

```
login: root
```

```
password *****
```

Note 1: the console sessions are listed from the internal page -> computer systems -> terminal servers

Note 2: to exit a telnet session, type "<ctrl>]" then "quit"

2. Reboot lehoula and watch for any errors in the terminal window:

```
shutdown -y -g5 -i6
```

Reboot the motor crates:

1. From a lehoula xterm: telnet hmotcrate

```
Login: disperse
```

```
Pass: *****
```

2. Inside the telnet session type: reboot

Start up the daemons:

From a lehoula xterm: hires start daemons

Note: you may need to start up watch_expo first,

```
hires start watch_expo
```

And also: hires start dispatcher2.0
